Course guide
230859 - FAM - Atomic and Molecular Physics

Unit in charge: Barcelona School of Telecommunications Engineering
Teaching unit: 748 - FIS - Department of Physics.
Degree: MASTER'S DEGREE IN ENGINEERING PHYSICS (Syllabus 2018). (Optional subject).
Academic year: 2023  ECTS Credits: 4.0  Languages: English

LECTURER
Coordinating lecturer: Consultar aquí / See here:
https://telecos.upc.edu/ca/estudis/curs-actual/professorat-responsables-coordinadors/responsables-assignatura
Others: Consultar aquí / See here:

PRIOR SKILLS
Electromagnetism, Mechanics, Probability and Statistics, Basics of Quantum Physics

REQUIREMENTS
Mechanics, Probability and Statistics, Thermodynamics, Quantum Physics

DEGREE COMPETENCES TO WHICH THE SUBJECT CONTRIBUTES

Basic:
CB6. Possess and understand knowledge that provides a basis or opportunity to be original in the development and/or application of ideas, often in a research context
CB7. Students should know how to apply the knowledge acquired and their problem-solving ability in new or little-known environments within broader (or multidisciplinary) contexts related to their area of ¿¿study.
CB9. Students should know how to communicate their conclusions and the knowledge and ultimate reasons that support them to specialized and non-specialized audiences in a clear and unambiguous way.
CB10. Students should possess the learning skills that allow them to continue studying in a way that will be largely self-directed or autonomous.

TEACHING METHODOLOGY
There will be three hours per week of lectures, addressing both theory and practical exercises.

LEARNING OBJECTIVES OF THE SUBJECT

• Know how to describe atoms, and how those can be treated quantum mechanically
• Understand the behavior of atoms in electromagnetic fields
• Explain the appearance of the fine and hyperfine structures
• Understand how the symmetries of the wave function and of the orbitals lead to the periodic table of the elements
• Fundamentals of molecular physics
• Approach to recent discoveries and state-of-the-art experimental techniques

**Total learning time:** 100 h

CONTENTS

**Topics**

**Description:**
- Introduction: the hydrogen atom
- Interaction between atoms and external fields (static, and oscillating)
- Fine and hyperfine structure
- Selection rules
- Symmetries of the wave function
- Atoms with many electrons (Thomas Fermi model, and Hartree-Fock method)
- Understanding the periodic table of the elements
- Molecular structure and degrees of freedom
- Spectroscopy techniques
- Laser cooling and preparation of ultra-cold quantum gases of bosons and fermions

**Specific objectives:**
Doesn't apply.

**Related activities:**
Upon request it will be possible to visit experimental atomic physics research labs at the Institute of Photonic Sciences (ICFO, in Castelldefels).

**Full-or-part-time:** 100h
- Theory classes: 28h
- Practical classes: 4h
- Guided activities: 20h
- Self study: 48h

GRADING SYSTEM

The final score will result from the weighted average of two marks:
- E1 (70%): homeworks assigned on a regular basis.
- E2 (30%): written report, oral presentation and defense of a personal project.

There will be no re-evaluation.

EXAMINATION RULES

Doesn't apply.
